Remdesivir gave 50% death in Ebola trials

19:56:07 From Simon to Everyone:

Remdesivir

Remdesivir is the first covid treatment to be used in the US. A study of Remdesivir for Ebola showed that treatment with Remdesivir kills more than 50% of patients (20) Nevertheless, Remdesivir was proposed as the only authorized treatment (21).

This leads to fatal acute kidney failure (22), A recent of more than 5,000 covid-19 patients confirm the renal failure and potential fatal adverse effects of Remdesivir(23). All these deaths were counted as covid deaths.

For those who follow American politics, if you do not here is the eye opener. The Southern Border had 2 million illegal people entered the USA in 11 months in 2021. So when section 42 is abolished at the end of the month, it is expected that 18,000 illegals will enter the USA, and sent to Republican states to switch the results in the mid term elections in November. This is why the Governors in the Republican states are pushing these illegal arrivals to Washington DC to let the Democrats provide food shelter education for these arrivals. These Democrats are Neo Marxists and are simply evil.
