20:19:22 From Sharon, to Everyone:

Most important stats worked out are from Prof Thakur:

1. From March 1990 to December 2021 there were 2,253 Covid deaths in Australia. This has escalated to 8,076 deaths as at 20th May, 2022. That is an increase of 5,823 Covid deaths in Australia in just first 5 months of 2022!

2. Based on NSW Respiratory Surveillance Report week 19, ending 14th May, 2022, Figure 4 is very revealing stats (see screenprint below). There were 570 hospital admissions with Covid in NSW of which 266 people were triple jabbed, 122 double jabbed, 11 single jabbed and 122 no dose/unknown. So add double jabbed 122 to triple jabbed 266 = 388 Covid admissions out of 570 cases. That's a whopping 68%; compared to 122 unjabbed/unknown out of 570 = 30%.

3. Figure 4 below shows 74 Covid deaths (triple and double jabbed) out of 90 Covid deaths = 82%; compared to 15 deaths (unjabbed/unknown) out of 90 Covid deaths = only 16.6%.
