First thing to note from The Great Taking book mentioned by Charles last week is...The Velocity of Money (VoM) has collapsed in the last 50 years. The VoM is the GDP divided by the supply of Money. Its gone from 5.8 to 1. This is because production has been offshored and money has been printed beyond the capacity of current generations to repay and overseas borrowings increased dramatically. Australia is in trouble. It means that your dollar used to be spent almost 6 times. Now your dollar is spent once and then goes overseas to pay for imports and to the government in GST and income tax.
