Today is Friday 8th December 2023, the 43rd anniversary of the murder of John Lennon on 8th December 1980, and the 40th anniversary of the theft of our family computer company by a Melbourne barrister and solicitor on 8th December, 1983. They used legal shenanigans to steal the company when it was on the cusp of a \$60 million deal in the first year and growing after that. They had no idea how to make the business work and the big US company we were dealing with knew they stole the business and refused to deal them. So everyone lost out. Today, it is now 40 years later, and we have "wandered in the wilderness" for those 40 years. Perhaps some of us will soon reach the Promised Land of a comfortable retirement through our subsequent endeavours.

One thing, I want revealed is the certainty about the job deaths of 2 sites shown in MOAR video as part of the 20 Worst Sites for Excess Deaths. It's a town on east coast of NZ south island called Oamaru with population of almost 14,000. 300km NW of Invercargill (allegedly bigger cluster of job deaths there on sth island). There is a revealing 1.17mins video in 2022, showing lots of "fresh" graves in Oamaru Lawn Cemetery. The council said it was bad weather. As mentioned in a follow up video by the woman who was in the car with her partner speaking in short video (seeing her 2 dead sons for past 8-9 years). Dr Shelton NZ messaged me that the Oamaru Council said it was recovering

the grave sites -hmm. Watch the 2 short videos. No headstones, just small white crosses and gaps of grass for empty plots - 90+ fresh graves. <https://seemorerocks.is/amaru-council-90-graves-because-of-bad-weather/>

Found this re: PCR test: From The Spectator (pay-walled-will post in Summary - <https://www.spectator.com.au/2021/05/how-accurate-are-pcr-tests/>) Further, the judge referred to the statement by the inventor of PCR tests Dr Cary Mullis, who stated that PCR tests are not to be

used for diagnostic purposes and do not of themselves indicate anything at all regarding whether a person is ill or infected.

The judge also referred to a 2020 study — Predicting Infectious Severe Acute Respiratory Syndrome Coronavirus 2 From Diagnostic Samples – PubMed (nih.gov), — where the authors affirmed that PCR tests are not determinative of illness. In this regard, the judge questioned the number of amplification cycles utilised in the tests, noting that after 24 such cycles, the test is practically useless for diagnostic purposes, since at that point they cannot demonstrate whether the virus is capable of reproducing itself and will result in false positives.
